The graphic features a dark gray background with a horizontal white band across the center. Behind the band, three overlapping circles in two shades of blue (teal and a darker blue) are visible, creating a layered effect. The text "Efficiency Plan" is centered within the white band.

Efficiency Plan

Efficiency Plan Overview

STREAMLINING DATA FLOW
ACROSS HUBSPOT, FIBERY, AND
MAKE

REDUCING MANUAL WORK
THROUGH AUTOMATION

ENABLING REAL-TIME INSIGHTS
FOR DECISION-MAKING

Pain Points Hindering Efficiency

Key Improvement Areas

01

Standardize
personas &
require KOL type
in forms

02

Map contact
sources into
simplified,
readable buckets

03

Automate deal
creation &
pipeline
advancement
from form events

04

Sync external
user status and
requests into
Fibery

Automation Strategies

AUTOMATED WORKFLOWS FOR
COMMON DEAL TRANSITIONS
(E.G., DEMO → FOLLOW-UP)

FORM-DRIVEN ROUTING TO
ASSIGNED OWNERS AND
TARGETED LISTS

LIST IMPORT TRIGGERS WITH
BATCH DEAL AND COMPANY
CREATION

REAL-TIME DATA SYNCS
BETWEEN HUBSPOT AND FIBERY
FOR CRITICAL MILESTONES

Phased Implementation Roadmap

1

Phase 1 (2 months): Data cleanup and persona redesign

2

Phase 2 (2–4 months): Core workflow and automation rollout

3

Phase 3 (2 months): Integration scaling and Make middleware enhancements

Efficiency Gains & Expected Outcomes

20–30% manual data entry reduction

Faster and more consistent contact routing

Improved reporting granularity for marketing and sales funnels

Enhanced collaboration between external and internal teams

The slide features a dark gray background with a horizontal white band across the center. Behind the band, three overlapping circles in shades of blue and teal are visible. The text "Integration Plan" is centered within the white band.

Integration Plan

Integration Plan Overview

01

Connect HubSpot
(external CRM)
with Fibery
(internal project
brain)

02

Use Fibery's native
HubSpot
integration as the
backbone

03

Add Make for
targeted
automations and
GA4 reporting
where needed

Target Integration Architecture

One-way historical + ongoing sync from HubSpot to Fibery (Contacts, Companies, Deals, Engagements)

HubSpot remains source of truth for CRM and pipeline stages

Fibery becomes the main workspace linking projects to synced CRM records

Data Integration Process Map

Integration Options & Chosen Pattern

Option 1: Native one-way HubSpot → Fibery sync only

Option 2: Native sync plus light two-way updates via Make (chosen)

Option 3: Fully custom API scripts (highest maintenance, not chosen)

Detailed Sync Design

Sync Contacts, Activities, and Deals into dedicated Fibery databases

Link synced records to Fibery Projects/Initiatives/Tasks

Keep HubSpot's timeline lighter, with Fibery holding rich internal notes and subtasks

Object & Field Mapping (Conceptual)

CONTACTS → “CUSTOMER CONTACTS”
(EMAIL, PHONE, COMPANY/CLINIC,
REGION, PERSONA/KOL, LIFECYCLE)

ACTIVITIES → “CUSTOMER
ACTIVITIES/EVENTS” (TYPE, DATE,
RELATED CONTACT, RELATED PROJECT)

DEALS → “SALES DEALS” (PIPELINE,
STAGE, OWNER, REGION, AMOUNT)
LINKED TO DEMOS/ONBOARDING

Meeting Workflow Across Tools

Before meetings: HubSpot data (contact, company, stage) visible in Fibery for prep

During/after: Notes and follow-ups captured in Fibery and linked to synced contacts/deals

Key updates (cleaned contact details, short outcome) written back to HubSpot via small two-way flows

Make.com Use Cases (HubSpot ↔ Fibery)

Trigger: Fibery project or order moves to “Completed”

Action: Update corresponding HubSpot deal stage and notify responsible sales rep

Extendable to other flows: assignments, status sync, notifications across apps

Make.com Use Cases (HubSpot ↔ Fibery)

GA4 ↔ HubSpot Revenue Loop (via Make)

Trigger: HubSpot deal moves to
“Closed Won”

Logic: Pull GA Client ID from
contact, compute final revenue

Action: Send GA4 “Purchase”
event with deal value to attribute
true campaign ROI

Integration Risks & Open Questions

DATA QUALITY RISKS: BAD CRM DATA
PROPAGATING INTO FIBERY AND GA4

OPERATIONAL RISKS: MAKE OPERATION
LIMITS, NO NATIVE STAGING IN LOWER
PLANS

OPEN QUESTIONS: EXACT TWO-WAY
FIELDS, OWNERSHIP OF ERROR HANDLING,
AND ROLLOUT/TESTING APPROACH

Data Insights

Data Quality Baseline (Current State)

01

33% OF CONTACTS
MISSING KOL TYPE
(1,886 OF 6,066)

02

FRAGMENTED KOL
CATEGORIES: 7+ NICHE
TYPES WITH VERY
SMALL COUNTS

03

MESSY SOURCE FIELDS:
TECHNICAL FILENAMES
AND URLS INSTEAD OF
READABLE CHANNELS

04

RECRUITING CONTACTS
MIXED INTO
CLINICAL/INVESTOR
ANALYTICS (EXAMPLE:
"QARA LEAD PHONE
SCREEN")

05

IMPACT: LIMITS
SEGMENTATION,
TARGETING, AND
FUNNEL VISIBILITY

Expected Data Quality Improvements (Post-Implementation)

Marketing Attribution Gap (GA4 ↔ HubSpot)

CURRENT: GA4 SEES INITIAL FORM SUBMISSIONS BUT LOSES VISIBILITY AT DEAL CLOSURE

GAP: CAN'T CALCULATE TRUE CAMPAIGN ROI OR ATTRIBUTION (E.G., "WHICH CAMPAIGN LED TO THIS \$1K+ DEAL?")

SOLUTION: GA4 PURCHASE EVENTS TRIGGERED BY HUBSPOT "CLOSED WON" DEALS, TIED TO ORIGINAL CAMPAIGN VIA STORED CLIENT ID

BENEFIT: FULL CUSTOMER JOURNEY VISIBILITY FROM AD CLICK → FORM → DEMO → REVENUE

Q & A
